### product description

- Surface treatment

Oxidation: triacid oxidation is formed by electrolysis of a conducting acid electrolyte by an electric current

The aluminum surface of the anode is oxidized, and a thick and dense layer of alumina is naturally grown on the aluminum surface. The protective film is not an additional layer and will not peel off.

- Spraying

(Spray is powder coating, powder spraying equipment (electrostatic spray molding machine) spray powder coating to the surface of the workpiece after high temperature baking, leveling and curing, into a final coating with different effects)

- Scope of application

Door head, background wall, building exterior wall, bar facade

- Material advantage

Fireproof, moisture-proof, formaldehyde-free, moth-proof, easy to install, good properties, beautiful environmental protection, stable performance
